## So what is an alkaline water ionizer?

Simply put, mother nature never intended for us to drink water from the tap. Water in its natural state is alkaline (between 7.5 and 9.5 pH), full of oxygen, minerals from rocks, and energy from the sun that works like an antioxidant in our bodies. But when water is treated municipally, it loses its energy because it sits around in holding tanks for long periods of time, the oxygen dissipates, and any alkalinity is lost, thus making the water acidic. What's worse, the water is also contaminated with fluoride and chlorine and other substances toxic to our bodies.

The acidic tap water we drink (and acidic bottled water too) -- along with the acidic foods that we consume such meats, bread, rice, oil, and potatoes -- end up making our body pH acidic. Our bodies must remain at least at a neutral pH of 7.0 to feel good, balanced, and energized. Acid breaks down our bones and tissues, it makes us feel stressed, it gives us headaches, it messes up our bowel movements and digestion, and leads to adult onset diseases like cancer, arthritis, and other diseases.

Simply put, a KYK water ionizer fixes all of this. **Alkaline water** produced by our KYK water ionizer and water filter produces water at a pH of at least 9.5, over time naturally balancing our body's pH by neutralizing the acid in it. Through electrolysis, it breaks up the H<sub>2</sub>O molecule and changes it to OH<sup>-</sup>, immediately releasing tons of oxygen into your water to the point that it is cloudy. The minus sign refers to the water taking on energy in the form of hydroxyl ions, which work as natural antioxidants in our bodies, cleaning out our cells in the same fashion as the antioxidants in orange juice or blueberries. The other important process that happens during electrolysis is microclustering. This means that the molecules of water are attracted to each other and become much closer together. Thus you end up getting more water molecules in your water and hydrating your body's cells six times as effectively as bottled or tap water.

When you drink pure, alkaline water it is absorbed immediately and the antioxidant quality of it attaches to the toxins inside your cells and flushes them from your body. The less toxins, the more balanced your pH. The more balanced your pH, the more efficient your body runs.

Drinking alkaline water can lead to quicker recovery times from illness or surgery, a stop of the progression of degenerative diseases like arthritis, cancer, fibromyalgia and more. Even if you don't have major diseases or illnesses, with a balanced pH level your metabolism will be more efficient, thus

making it easier to lose weight and gain the most from what you eat. You can also expect to feel more energy, and have clearer thoughts and less stress by drinking ionized water. To learn more about the health benefits of ionized water, please refer to our information section.

[KYK Water Ionizers](#) was started by master water technician Dr. Kim Young Kwi. His research has won many awards and so have his water ionizers. He is currently up for the Nobel Prize for his research. All KYK Water Ionizers are approved as medical devices by Japan's and Korea's ministries of health, whose standards are stricter than the U.S. health department. KYK Water Ionizers has also developed and patented the components for each of their water ionizers. They are one of a kind.

We work to make our water ionizers affordable and reliable. We offer a six-month free payment plan. We also offer 60 days to try KYK Water Ionizers out and see for yourself how well they work. Finally, we offer a five-year warranty just in case something goes wrong. However, the repair rate on our water ionizers is minimal.

Thanks for your interest in KYK water ionizers!
